

# Mobile App Wireframing Project

## App Name : ScholarX Mobile Learning App

**Purpose:** Help students access courses, assignments, tests, and progress tracking from their phones.

## Basic User Research

### Research Method

Conduct a quick survey among 5–10 students.

### Sample Findings

| Question                   | Result                             |
|----------------------------|------------------------------------|
| How do you study online?   | Mobile apps                        |
| Biggest challenge?         | Finding all resources in one place |
| Need assignment reminders? | Yes                                |
| Want progress tracking?    | Yes                                |
| Preferred device?          | Smartphone                         |

### User Needs

- Easy course access
- Assignment notifications
- Progress tracking
- Simple navigation
- Fast login

## User Persona

### Persona 1

**Name:** Rahul Sharma

**Age:** 20

**Occupation:** Engineering Student

**Goals:**

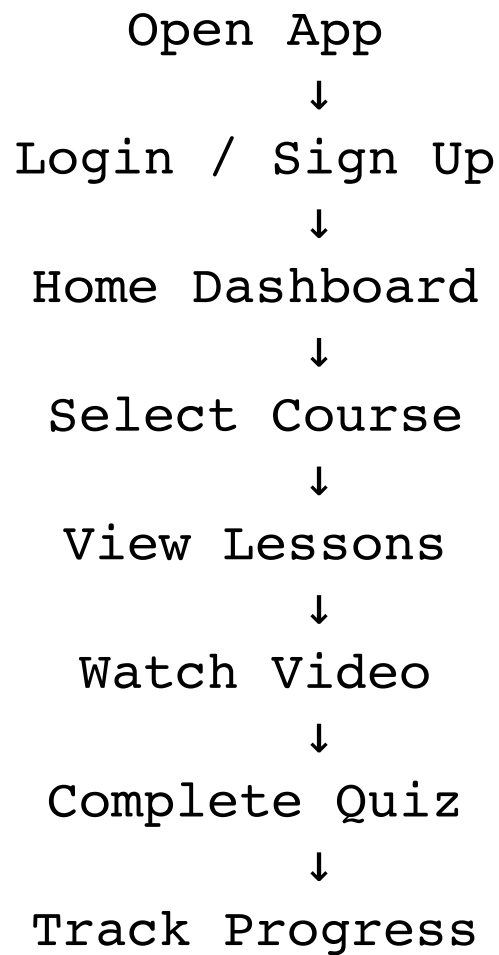

- Complete courses on time

Track learning progress  
Receive assignment reminders

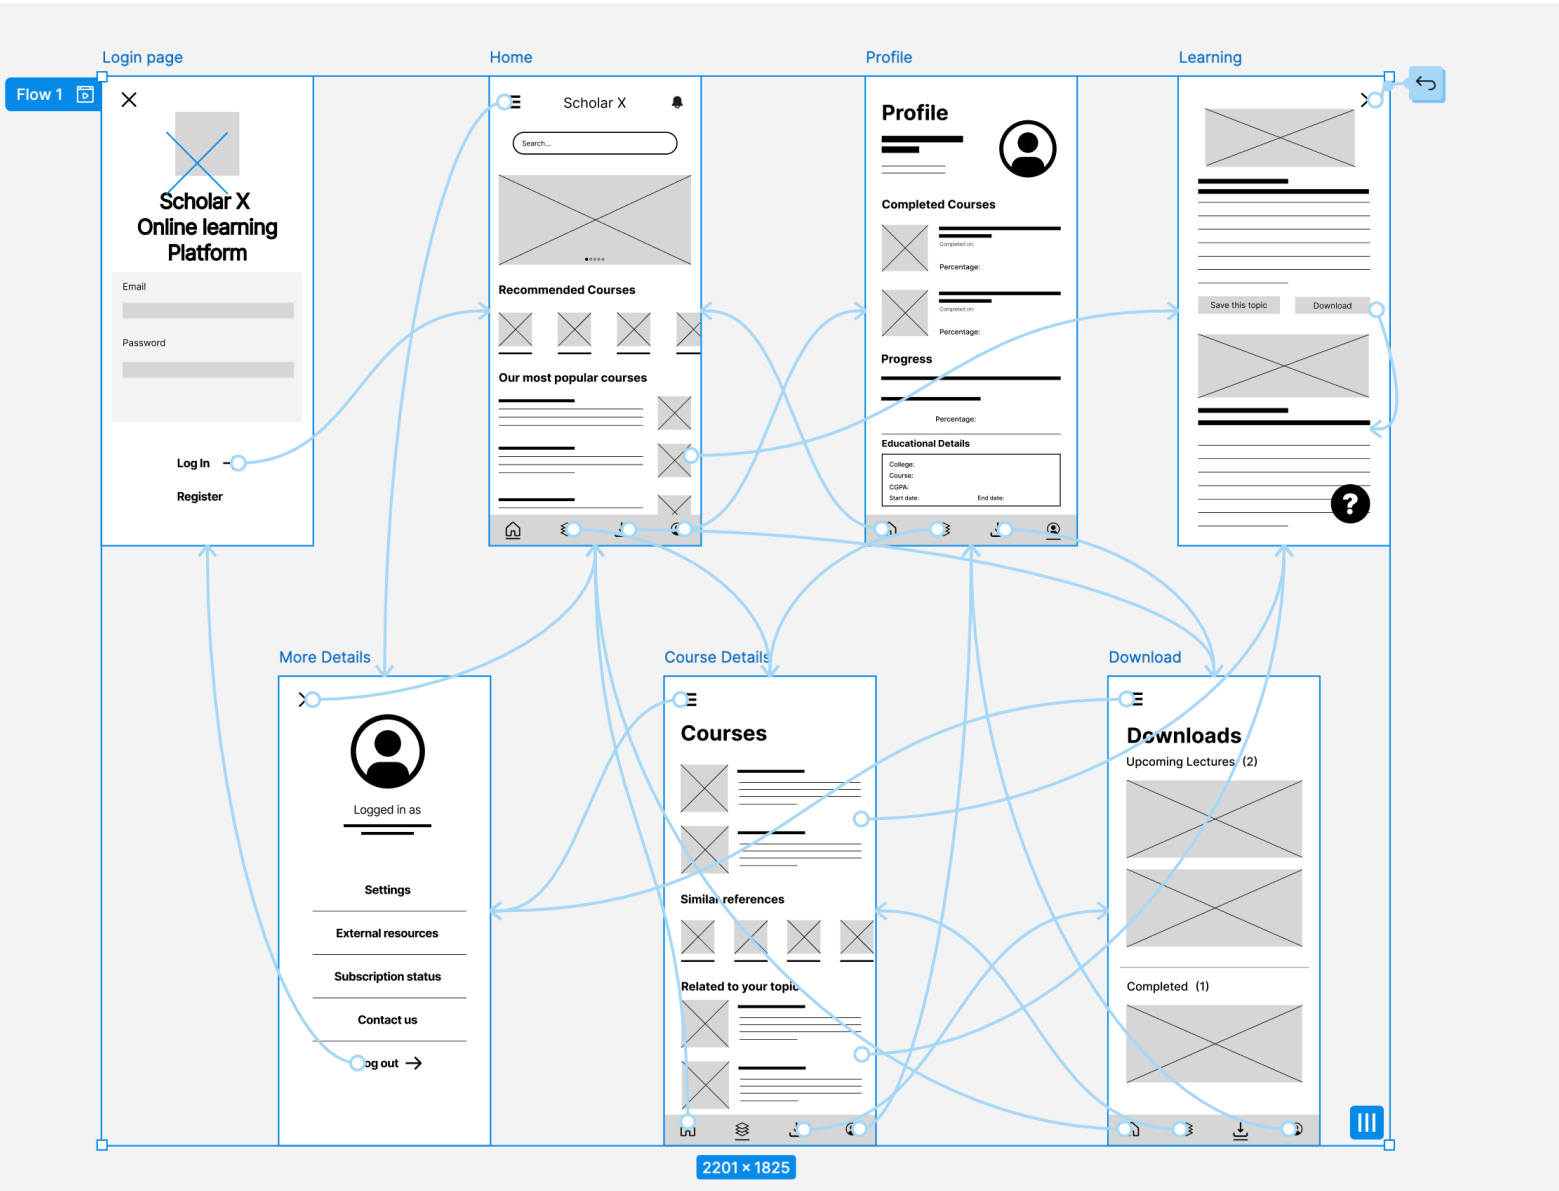

**Pain Points:**

Misses deadlines  
Uses multiple apps  
Difficult navigation

## User Flow

# 5. Low-Fidelity Wireframes

# 6. Design Thinking Process

## **Empathize**

Interviewed students to understand learning difficulties.

## **Define**

Students need a simple platform to manage learning resources and track progress.

## **Ideate**

Brainstormed features such as course management, quizzes, progress tracking, and reminders.

## **Prototype**

Created low-fidelity wireframes in Figma.

## **Test**

Gather feedback from classmates and improve navigation and layout.
